EDUCATION

University of Michigan

Ph.D. in progress, Applied Physics

M.Sc. Electrical and Computer Engineering (GPA: 4.00/4.00)

Ann Arbor, MI

Expected: Apr. 2027

May 2025

Huazhong University of Science and Technology (HUST)

B.Sc., Physics (*with honors*, GPA: 3.97/4.00)

Wuhan, China

Sept. 2018 - June 2022

RESEARCH EXPERIENCE

Functional MRI Lab, Univ. of Michigan

Graduate Student Research Assistant

Supervisors: Jon-Fredrik Nielsen, Ph.D., Doug Noll, Ph.D.

Ann Arbor, MI

Dec. 2022 - Present

- **Multidimensional MRI RF Pulse Design**

Developed autodifferentiation-based RF pulse design tool for spatially-selective excitation in steady-state sequence.

- **Advanced fMRI image acquisition/reconstruction**

Developing new image acquisition scheme / reconstruction framework for more reliable multi-echo fMRI.

Wuhan National Lab for Optoelectronics, HUST

Undergraduate Research Assistant

Supervisor: Jiang Tang, Ph.D., Boxiang Song, Ph.D.

Wuhan, China

Mar. 2020 - Apr. 2022

- **Quantum Dot Infrared Photodetector Design Based on FDTD Simulation**

Designed metasurfaces to enhance external quantum efficiency of the infrared photodetectors.

Optimized structures of quantum dot (QD) infrared photodetectors to maximize light absorption.

- **Perovskite-based X-ray Photodetector Design Based on Monte Carlo Simulation**

Modeled and Simulated X-ray incidence on MAPbI₃ photodetector using Geant4.

Analyzed the energy deposition spectrum of the process and provided guidance to the fabrication.

NCSU GEARS, Summer Research Program

Research Assistant (Remote)

Raleigh, NC

Jul. 2021 - Aug. 2021

- **Simulation Study of Two-Dimensional Charge Carriers at AlN/GaN Heterointerface**

Conducted simulation to explore the conditions that give rise to 2D hole gas (2DHG) at the heterointerfaces.

Presented in a poster that the 2DHG charge densities can be controlled by varying the quantum well width at the heterointerface.

Undergraduate Thesis Research

Research Assistant

Wuhan, China

Aug. 2021 - May 2022

- **Applications of Parallel Computing in Ultrafast Optics**

Computed the high-order harmonics generation (HHG) and above-threshold ionization (ATI) spectra of laser-molecular interaction in one-dimensional simulation using Fortran (serial computation)

Computed the HHG and ATI spectra in three-dimensional cases using parallel computing (OpenMP and MPI)

JOURNAL PUBLICATIONS

- [C1] **Y. He**, P. Liu, L. Gao, B. Song, J. Tang. “Efficient Colloidal Quantum Dot Short-infrared Photodetectors with Coupled Metasurfaces.” *International Photonics and Optoelectronics Meetings*, 2022. (Poster).

TECHNICAL EXPERIENCE AND SKILLS

MRI Image Reconstruction

Model-based image reconstruction; non-Cartesian sampling (NUFFT); regularized reconstruction (TV, l_1 -wavelet, Tikhonov, etc); spatiotemporal modeling for dynamic imaging.

MRI Pulse Sequence

Development platform: Pulseseq (MATLAB)

Sequence types: GRE, SE/FSE

Sampling Scheme: 3D/SMS-EPI, Stack-of-spiral

Software Development

Programming language: MATLAB, Python, Julia, LaTeX, Fortran, C++

IDE/Package management: VS Code, Conda, pip

Parallel programming: OpenMP, MPI

Version control: Git / GitHub

HONORS AND AWARDS

National Scholarship

2020

Department of Education, China

0.2% of the class nationwide

Outstanding Undergraduate Award

2020

Huazhong Univ. of Sci. and Tech.

1.5% of the class in the university

First Prize of The National College Student Mathematics Competitions

2019

Chinese Mathematical Society
